

Estimated payments and volumes for RERT activation on 4 January 2020

AEMO activated two reserve contracts on Saturday 4 January 2020. AEMO activated the contracts due to an actual Lack of Reserve Condition 2 (LOR 2) in New South Wales.

AEMO also pre-activated, but did not activate, one other reserve contract on 4 January 2020 in response to the actual LOR 2. The reserve provided under this contract is only activated if an actual LOR 3 condition eventuates. As no LOR 3 condition occurred on 4 January 2020, activation was not required.

Estimated volumes of reserves and corresponding payment estimates are listed below. These estimates are based on the amount of reserves activated or pre-activated by AEMO. Actual delivered volumes and payments, to be confirmed following post event analysis, will be published in AEMO's quarterly RERT report for Quarter 1 2020, due to be published in May 2020.

4 January 2020

Location	Estimated capacity of reserve pre-activated (MW)	Estimated volume of reserve delivered MWh	Estimated payments \$
New South Wales	368 MW	232 MWh	\$7,265,996

AEMO is required to publish this report under clause 3.20.6(a) of the National Electricity Rules

Publication date – 9 January 2020.
