Debbie Voltz	Essential Energy		
Shavneel Nand	AEMO		
Antara Mascarenhas	AEMO		
Ben Healy	AEMO		
Michael Ryan	AEMO		
Jennifer Fikret	AEMO (Minute Taker)		

Red indicates an action.

Concern was raised regarding some discussion was not completely reflected in the Minutes of the last PCF.

1.0 APOLOGIES

Nil

2.0 WELCOME

A. Mouchaileh welcomed attendees.

3.0 BRIEF UPDATE

1. **General** – B. Healy summarised the meeting slide pack, noting that risks would be handled at the next PCF.

An IEC meeting was held on 21 December with the recommendation that the B2B Procedures be published and go second stage consultation.

An Executive Forum was also held in December 2016 with the key discussion point being Victorian meter types. AEMO agreed to approach the AER and discuss how meters will be treated post 1 December 2017.

2. Work Stream by Work Stream

Procedures draft determination came out on 30 December 2016. AEMO will publish the final determination package on 28 February. Procedures will then be recommended to AEMO's Board on 2 March and t published no later than 6 March 2017. AEMO will publish supporting guidelines and checklists simultaneously. The After reviewing feedback for the Exemption Guidelines for Meters, it will be published about a week later. PWG are meeting in March to discuss Package 3 plan (called "as built") and a few points which need clarification from Package 2.

B2B Work Group are reviewing 27 submissions/final determinations in preparation for the IEC and are preparing the B2B Procedures for the February meeting. The B2B working group are also working on a SMP Guideline to pick up gaps between procedures and a build pack. How to Become an EHub Accredited Party will also be written. Accreditation for B2B members will open up early March.

The System Working Group have completed responding to any design specification questions and are now focussing on low volume interface functionality and peer to peer (free form) messages. An updated schema has been released for the B2M (version 35) and the SWG are managing the ASWG for the next schema update along with currently looking at the B2B schema.

AEMO's Package 3 requires changes to be accepted around metrology and a tidy up refers to other documents i.e. Metrology tables etc. There will be no effect on functionality. AEMO will open the documents for consultation, however there may not be any content yet. AEMO is trying to capture anything that changes during the testing cycle. The consultation period may be extended and the final determination will be ready on 1 December 2017.

Today is the first session for the Readiness and Testing Work Groups. The ITWG are considering at the best way to test with industry.

Questions:

Cut over – there will be a Transition and Cut-Over Work Group - the call for Nominations will be sent soon, prior to a first meeting in March 2017. AEMO may approach the AER for leeway if it is needed for a smooth transition and if it removes the risk and customer impact. AEMO are looking at target testing around EN and MC's resulting from changes in Package 1 and affecting MSATS (B2M changes). Options to participate will be available and this will commence in April/May.

Consensus in the B2B working group – there are points of contention and some may go to the IEC who will finalise the decision. There were points raised around notified parties. The B2BWG has been consistent in their decision making process and will justify and respond to every bit of consultation feedback.

3. Readiness Report

There are around 20 participants not reporting. AEMO working with the AER are contacting likely participants. There was a concern that a Readiness Plan cannot be signed off on if all participants are not ready. J. Daws requested the next Readiness Report include a list of those not reporting. **Action:** A. Mascarenhas will check internally if there are any constraints to this. AEMO can produce a participant list to go with the report and who "is" participating. This will enable a better testing plan to be implemented. Some participants may not be reporting as they are not accredited yet, however they can report they are not accredited yet. A clear "middle ground" needs to be found.

February Readiness Report – B. Healy summarised the report.

Update on safety regulations – M. Whitfield (Commonwealth Environment & Energy Department) are trying to work with the safety territory regulators, ensuring they are aware of the changes occurring in the market and to try and get consistency where possible on issues. Re-energisation and de-energisation is on the radar and they are working with industry groups, the Australian Energy Council and a metering group. Their view the information they received from industry was fragmented and they could not make decisions or recommendations on. They have requested information from those industry groups, and the AEC will be giving them an update on where industry is up to with this. Some retailers have received a working group request.

The next step is to re-engage with all the regulators and policy departments and ensure they are comfortable with what is in place currently. An ideal outcome would be less jurisdictional divergence and more commonality.

Test strategy and test scripting is being discussed in the IT work group today. The PCF were told the procedures are written to accommodate changes. The regulators did not have exposure to these forums in the past.

4.0 WATCHING BRIEFS

1. VIC AMI meter classification

A meeting took place with the AER and DB representatives. Slide 10 summarises the details. The first discussion was on post 1 Dec 2017 when the current derogation will end in the rules. A second discussion was the substitution methodologies (metrology)

part B) and what changes it will have on systems and participants options in managing these changes. The last discussion was on the Victorian DBs requirements to do a delta accreditation, which MDP Type 4 services which are not currently offering with respect to the Terms and Conditions.

The meter type identification codes – there was a proposal that distribution businesses in Victoria could continue to use the status quo in terms of identifying their meters in the system (the code in the system about identifying the functionality), or they can continue to adopt the new code VIC AMI which AEMO introduces at the request of consultation, or another code – logically a variation of comms 4 code. Changes would require system updates. It was not resolved, that the instrument under 11.86.7 and there was no conversation on the contrary to the meter type codes.

Substitutions – AEMO's Metrology Procedures allowed for of all of the type 1 substitutions would come up if you considered meters type 4, plus two additional substitutions which are normally only available to meter types 5,6 and beyond. This would necessitate a system change when DBs provide data to retailers, they have to identify the substitution methodology, and where you use a 5.6 as a label, a 1.6 may have to be used. This is a labelling change that is effectively a system change.

J. Daws requires the Metrology Procedure Part B to be amended to allow these AMI Type 5, and if Jemena don't get that they are not in a position with the changes and the timetable of this program to be able to actually meet that new obligation. She feels that on the legal advice they have received by including this in the metrology procedure it allows Jemena to proceed without change in Victoria. She has been told it is consistent with the rules. A presentation on this has been sent to B. Healy.

On 11.86.7 the reaction within UE and confirmed with legal advice is that we cannot actually use deemed contracts under that cause to bypass a rule. Jemena want very little change because of the material change. They want the ability of retailers to be able to churn, once they are churned they are type 4s. Jemena see relabelling as conversion. They do not have time to do this if they go live on 1 December.

Jemena also think the substitution codes require changes to seven systems. This would require additional time. Some vendors cannot meet these timelines. The recommendation to AEMO is that they write into their procedures that in Victoria DBs can continue to use the same substitution code which they currently use today with no change. From a retail perspective data would continue to come in a file format with the same substitution codes. This has not address the other obligations that would come with metering. The wording in the rules is "interval meter is type 4", that would still require AEMO to do the delta re-accreditation on DBs in Victoria. Jemena would like to see no change to Vic AMI Type 5. They would like to the AER about saving \$4-8 million and deliver on 1 December so retailers can start churning these meters out as Type 4s. F. Brady would like to see a better representation of retailers as the meeting was between the AER, AEMO and DBs. Retailers need AEMOs Board will not go against something that is consistent with the rules. Action: AEMC and AER and Victorian Government input to go thru clarifying what can and can't be changed. A. Mascarenhas queried if the two issues are being confused, 1. The meter type and 2. Being the labelling. It would cost Jemena \$1.8 million and their vendor cannot make 1 December. This would turn their Readiness Report from amber to a red. Retailers need to know how to be compliant, and that the regulations are consistent with the various pieces of legislation, and it also it works for a broad range

of parties. The Grandfather Clause for all sites is when installing on site, the compliance is based on the date and time it was done. For the AMI meters in Victoria there should not be any change because of the date and time that the jurisdictional rule put them in as Type 5 AMI meters into MSATS. If meter types change in MSATS on 1 December participant IDs will be required to change to someone who is accredited to Type 4, (meaning 2.4 million meters need to change to type 4 to make new member data provider and meter provider compliant with the market).

- F. Brady suggested to stop thinking of meters and focus on customers. Every massive change on 30 November is going to have a customer impact. Advice was to focus the conversation follow on from the AER with impacted parties and if anyone is interested AEMO will put a point in to follow up in the next PCF.
- 2. <u>Victorian Government Consultation on the Adoption of Competition in Metering in Victoria.</u>

Feedback is a Q1 decision or recommendation is being targeted. J. Daws queried if changes were discussed i.e. alterations to systems and procedures to accommodate outcomes to elaborate on this. AEMO informed the changes depend on which decisions are made. A. Mascarenhas noted it is unknown until an exact outcome is decided on. Detail is lacking in the four scenarios. Option 4 is likely being adopted - LNSP as MC for a period of time in perpetuity.

Any decisions the Victorian Government choose to make to give effect to their decision will require AEMO to work them once the decision has been analysed. AEMO would prefer not to do another procedure consultation.

Any process with the AEMC and AEMO will run for six months and if a decision is not made, it could not conclude before 1 December.

J. Daws heard on Option 2 discussion about changes for some Victorian meter specifications. This would not be considered before 1 December, and will be investigated later on. AEMO feedback for the Victorian Government is to advise ASAP when a decision is made.

A consumer could end up stranded before Christmas. AEMO is aware of this risk and the Department is working as quickly as they can however decisions need to be taken up thru government processes (going to cabinet). It was suggest Victorian DBs reiterate the "point of no return" if they have any discussions with the Victorian government.

5.0 OTHER BUSINESS

After the ITWG today is the PCF will be looking at issues as well as risks.

Next PCF will be 23 February 2017.

FEBRUARY 2017 READINESS REPORT

Summary:

- Project status has changed from green to amber compared to January 2017:
 - Status of "at risk" of achieving project deliverables on schedule.
 - Progress approximately 20% (substantially unchanged).
 - Risk rating of "medium".
- Participant categories:
 - Retailers and Distribution Businesses overall reporting amber ("at risk").
 - MC, MP and MDP, ENM overall reporting green ("within schedule").
- Jurisdictional status and rating in line with overall project status apart from a high risk rating in Victoria

FEBRUARY READINESS REPORT

Highlighted risks:

- Amber status primarily relates to the timing and scope of B2B procedure changes and subsequent impacts on:
 - Business process design.
 - System development, build and testing, with compressed timeframes for Industry Testing highlighted.
- Other issues highlighted include:
 - Lack of clarity on safety regulations
 - "Medium" to "high" risk rating highlighted in Victoria relates to the ongoing uncertainty associated with:
 - The Victorian Government Transition to Metering Competition in Victoria decision timing in March 2017.
 - VICAMI meter type classification.
- Mitigating actions include:
 - B2B working group working towards planned timeframes (IEC meeting 20 February and final determination publication on 6 March 2017)
 - Readiness working group commencing planning for Industry Testing and Industry Accreditation and Registration in February 2017.
 - Industry actively engaging with the Vic Government process, March 2017 remains on track.
 - Industry discussion on VICAMI meter type classification on the agenda for the February 2017 Program Consultative Forum meeting.

FEBRUARY READINESS REPORT

Number of submissions:

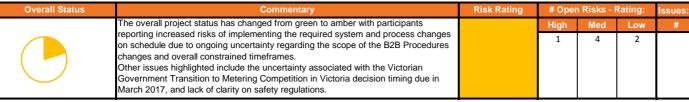

- 27 reports received in total representing the following participant roles:
 - 12 retailers
 - 13 distribution businesses (includes initial MC, MP and MDP)
 - 3 metering companies (MPD, MP)
 - 5 metering coordinators (MC)
 - 2 embedded network manager (ENM)
- Majority of participants' reporting unchanged from January 2017.

Note that organisations can nominate for multiple roles and participants can submit combined reports (i.e. one report for two distribution businesses)
