## 1. Introduction

This report details the loss factors calculated for the 2023/24 financial year as required by section 2.27 of the Market Rules.

To comply with the obligations under section 2.27 of the Market Rules Western Power has:

- Recalculated all transmission loss factors.
- Recalculated all average distribution loss factors.
- Recalculated all individual distribution loss factors for customers with a CMD greater than 7,000 kVA.
- Recalculated all individual distribution loss factors for customers with a CMD between 1,000 and 7,000 kVA located greater than 10 km from the electrically closest substation.
- Recalculated the individual distribution loss factors for customers with a CMD between 1,000 and 7,000 kVA located less than 10 km from the electrically closest substation, where an individual distribution loss factor has been elected by the associated retailer.
- Recalculated all individual distribution loss factors for distribution connected generation customers.

## **2. Basis for Calculation**

Western Power calculates loss factors in accordance with the Market Procedure for Determining Loss Factors (the Market Procedure). The following sections provide further detail on the methodology used by Western Power in calculating loss factors.

### **2.1 Transmission loss factors**

Western Power has calculated the transmission loss factors in accordance with section 4.1 of the Market Procedure using the software package T-price.

### **2.2 Average distribution loss factors**

The methodology calculates the average distribution loss factors by:

- Determining losses within the zone substation transformers.
- Determining HV feeder losses.
- Determining distribution transformer losses.
- Determining LV feeder losses (allowing separately for residential and commercial losses).
- Western Power allocates the average distribution losses based on the usage of the various components of the network. An appropriate basis for this allocation is the reference services (offered in Western Power's access arrangement) and in accordance with the Market Procedure Western Power has determined an average loss factor for relevant reference services.

### **2.3 Individual distribution loss factors**

Western Power calculates the individual distribution loss factors in accordance with section 4.2 of the Market Procedure.

The methodology used to calculate the individual distribution loss factors uses the formulae and methodology detailed in Schedule 4 of the Electricity Distribution Regulations 1997.<sup>1</sup> Schedule 4 of the Electricity Distribution Regulations 1997 is reproduced below:

1. To calculate the loss factor for a distribution connection which is an exit point a corporation must follow the following steps:
  - (a) the corporation must determine the line losses assuming the distribution connection was not there and assuming feeder maximum load;
  - (b) the corporation must determine the line losses assuming only the distribution connection was there and assuming feeder maximum load;
  - (c) the corporation must determine the total line losses assuming all the distribution connections are there (including the distribution connection for which the loss factor is being determined) and assuming feeder maximum load;

---

<sup>1</sup> For sites supplied from multiple feeders the distribution loss factor has been determined as if the load is evenly split across the feeders. The resultant distribution loss factor is the average of the calculated distribution loss factors.

- (d) the corporation must allocate a share of the total line losses calculated under step (c) to the distribution connection for which the loss factor is being determined based on the ratio of the result of step (b) and the sum of the results of steps (a) and (b);
- (e) the corporation must calculate the loss factor for the distribution connection by applying the following formula:

$$LF_{Exit} = 1 + \frac{A}{B}$$

where —

- A (in kW) is the share of the total line losses allocated to the distribution connection under step (d);
- B (in kW) is the contract maximum demand for the distribution connection.

2. To calculate the loss factor for a distribution connection which is an entry point a corporation must follow the following steps:

- (a) the corporation must determine the line losses assuming the distribution connection was not there and assuming feeder maximum load;
- (b) the corporation must determine the total line losses assuming all the distribution connections are there (including the distribution connection for which the loss factor is being determined) and assuming feeder maximum load;
- (c) the corporation must calculate the loss decrease or increase for the distribution connection for which the loss factor is being determined by subtracting the result of step (b) from the result of step (a);
- (d) the corporation must calculate the loss factor for the distribution connection by applying the following formula:

$$LF_{Entry} = 1 + \frac{A}{B}$$

where —

- A (in kW) is the loss increase or decrease calculated for the distribution connection under step (c);
- B (in kW) is the declared sent-out capacity for the distribution connection.

### **3. Applicable Reference Services**

The Market Procedure requires Western Power to define a subset of reference services as 'Applicable Reference Services'. The following table details the reference services that will be allocated to 'applicable reference services' from 1 July 2023.

#### **3.1 Applicable Reference Services**

<b>AA4 Reference services that are 'Applicable Reference Services'</b>
A1 – Anytime Energy (Residential) Exit Service
A2 – Anytime Energy (Business) Exit Service
A3 – Time of Use Energy (Residential) Exit Service
A4 – Time of Use Energy (Business) Exit Service
A5 – High Voltage Metered Demand Exit Service
C5 – High Voltage Metered Demand Bi-directional Service
A6 – Low Voltage Metered Demand Exit Service
C6 – Low Voltage Metered Demand Bi-directional Service
C1 – Anytime Energy (Residential) Bi-directional Service
C2 – Anytime Energy (Business) Bi-directional Service
C3 – Time of Use (Residential) Bi-directional Service
C4 – Time of Use (Business) Bi-directional Service
A12 – 3 Part Time of Use Energy (Residential) Exit Service
C9 – 3 Part Time of Use Energy (Residential) Bi-directional Service
A13 – 3 Part Time of Use Energy (Business) Exit Service
C10 – 3 Part Time of Use Energy (Business) Bi-directional Service
A14 – 3 Part Time of Use Demand (Residential) Exit Service
C11 – 3 Part Time of Use Demand (Residential) Bi-directional Service
A15 – 3 Part Time of Use Demand (Business) Exit Service
C12 – 3 Part Time of Use Demand (Business) Bi-directional Service
A16 – Multi Part Time of Use Energy (Residential) Exit Service
C13 – Multi Part Time of Use Energy (Residential) Bi-directional Service
A17 – Multi Part Time of Use Energy (Business) Exit Service
C14 – Multi Part Time of Use Energy (Business) Bi-directional Service
A19 – Super Off-peak Energy (Business) Exit Service
C17 – Super Off-peak Energy (Business) Bi-directional Service
A18 – Super Off-peak Energy (Residential) Exit Service
C16 – Super Off-peak Energy (Residential) Exit Service

**AA4 Reference services that are 'Applicable Reference Services'**

A21 – Super Off-peak Demand (Business) Exit Service

C19 – Super Off-peak Demand (Business) Bi-directional Service

A20 – Super Off-peak Demand (Residential) Exit Service

C18 – Super Off-peak Demand (Residential) Bi-directional Service

C23 – LV Distribution Storage Bidirectional Service

C24 – HV Distribution Storage Bidirectional Service

A22 – Low Voltage Electric Vehicle Charging Exit Service

C20 – Low Voltage Electric Vehicle Charging Bi-directional Service

A23 – High Voltage Electric Vehicle Charging Exit Service

C21 – High Voltage Electric Vehicle Charging Bi-directional Service

## 4. Transmission Loss Factors

Western Power has calculated the following transmission loss factors for the 2023/24 financial year. For the 2023/24 financial year, Western Power is required to publish Transmission Loss Factors in two different forms, following the change to the Reference Node<sup>2</sup> on the New WEM Commencement Day.

**Table 4.1 - Transmission Loss Factors**

TLF Code	Description	Applied in 2022/23	To apply from 1 July 2023 until the New WEM Commencement Day	To apply from the New WEM Commencement Day
TAPA	Alcoa Pinjarra (Alcoa)	1.0223	0.9829	0.9636

## 5. Average Distribution Loss Factors

Western Power has calculated the following average distribution loss factors (DLF) for the 2023/24 financial year based on the Market Procedure:

**Table 5.1 - Average Distribution Loss Factors**

Customer Segment	Applicable Reference Services	DLF Code	Applied in 2022/23	To apply in 2023/24
Residential	A1 - Anytime Energy (Residential)	QRT1	1.0655	1.0797
	A3 - Time of Use Energy (Residential)			
	C1 – Anytime Energy (Residential) Bi-directional			
	C3 – Time of Use Energy (Residential) Bi-directional			
	A12 - 3 Part Time of Use Energy (Residential)			
	A14 - 3 Part Time of Use Demand (Residential)			
	A16 - Multi Use Part Time of Use Energy (Residential)			
	C9 - 3 Part Time of Use Energy (Residential) Bi-Directional			
	C11 - 3 Part Time of Use Demand (Residential) Bi-Directional			
	C13 - Multi Use Part Time of Use Energy (Residential) Bi-Directional			
	A18 – Super Off-peak Energy (Residential) Exit Service			
	C16 – Super Off-peak Energy (Residential) Exit Service			
	A20 – Super Off-peak Demand (Residential) Exit Service			
	C18 – Super Off-peak Demand (Residential) Bi-directional Service			
Small Business	A2 - Anytime Energy (Business)	QRT2	1.0474	1.0496
	A4 - Time of Use Energy (Business)			
	C2 – Anytime Energy (Business) Bi-directional			
	C4 – Time of Use Energy (Business) Bi-directional			
	A13 - 3 Part Time of Use Energy (Business)			
	A15 - 3 Part Time of Use Demand (Business)			
	A17 - Multi Use Part Time of Use Energy (Business)			
	C10 - 3 Part Time of Use Energy (Business) Bi-directional			
	C12 - 3 Part Time of Use Demand (Business) Bi-directional			
	C14 - Multi Use Part Time of Use Energy (Business) Bi-directional			
	A19 – Super Off-peak Energy (Business) Exit Service

## 7. Explanation for Changes in Loss Factors

In accordance with clause 2.21(b)ii of the Market Procedure Western Power is required to provide an explanation for any changes of more than 0.025 in any transmission or distribution loss factors when compared to the previous year.

In general, loss factors increase with demand at a node and decrease with increasing generation at a node. Loss factors can also be affected by changes in network configuration.

### 7.1 Transmission loss factors

**Table 7.1** is a list of the transmission loss factors that moved by more than 0.025 in 2023/24. Loss factors for the transmission network are calculated based on half hour data for the whole system over the whole year. Individual transmission loss factors are not only affected by the quantity of usage at a node but also the time the usage occurs and being a meshed network, they are also affected by usage at other nearby nodes. More specific reasons for the movements are difficult to determine.

**Table 7.1 - Transmission Loss Factors changed by more than 0.025**

# **Appendix B**

## Individual Distribution Loss Factors by NMI

## B.1 Individual Distribution loss factors by NMI

The individual distribution loss factors calculated for the 2022/23 financial year are associated with the following NMIs.

**Table 7.4 - Individual Distribution Loss Factors by NMI**

NMI	DLF Code	Required or Optional <sup>3</sup>
8001000107	QCSW	Optional
8001000121	QTAL	Required
8001000122	QPEB	Required
8001000125	QKEM	Required
8001000130	QCEN	Required
8001000158	QLGA	Required
8001000234	QLGD	Required
8001000259	QWDB	Optional
8001000261	QWCQ	Optional
8001000265	QGWF	Optional
8001000269	QKUD	Required
8001000270	QMID	Optional
8001000274	QBGP	Optional
8001000280	QWCB	Optional
8001000282	QWCE	Optional
8001000284	QWCW	Required
8001000286	QAAL	Optional
8001000287	QFFM	Required
8001000298	QSAP	Optional
8001000325	QWMD	Required
8001000329	QBPA	Required
8001000332	QWCP	Optional
8001000333	QDOD	Optional
8001000345	QHVI	Required

<sup>3</sup> Individual distribution loss factors have been assessed as either required or optional in accordance with section 3.2.5 of the Market Procedure. The calculation of optional distribution loss factors is at the cost of the retailer.

NMI	DLF Code	Required or Optional <sup>3</sup>
8001000357	QWCO	Required
8001000359	QHGM	Required
8001000373	QHAP	Required
8001000379	QDAG	Required
8001000394	QSJM	Optional

# **Appendix C**

## **Extinct Loss Factor Codes**

## C.1 Extinct Loss Factor Codes

The following loss factor codes have not been recalculated for the 2023/24 financial year.

**Table 7.5 – Individual Transmission Loss Factors**

DLF code	Reason for not being calculated
TMSK	Extinct connection
WFRT	Extinct connection

**Table 7.6 - Individual Distribution Loss Factors**

DLF code	Reason for not being calculated
QAWT	Not eligible for consideration
QBBP	Not eligible for consideration
QBWA	Not eligible for consideration
QBWB	Not eligible for consideration
QBWC	Not eligible for consideration
QDOF	Not requested by retailer
QDTO	Not requested by retailer
QDWL	Not requested by retailer
QGLM	Not eligible for consideration
QHEL	Not requested by retailer
QILR	Not requested by retailer
QIRA	Not eligible for consideration
QIRB	Not eligible for consideration
QMEE	Not requested by retailer
QMMP	Not requested by retailer
QMTC	Extinct connection
QPWA	Not eligible for consideration
QTMB	Not eligible for consideration
QTMH	Not eligible for consideration
QVLW	Not requested by retailer
QWAD	Replaced with QZSC

<b>DLF code</b>	<b>Reason for not being calculated</b>
QWMI	Not requested by retailer
QWPL	Not requested by retailer
QWSI	Average value applied
QYTE	Not requested by retailer
QLEH	Not requested by retailer
QR7Z	Merged with QZSC
