## Version Control

A major version change occurs when the WEM Rules or WEM Procedures require changes to the equations from a particular Trading Day onward.

A minor version change may occur for editorial changes, manifest errors or implementation changes that will apply to the same Trading Day period as dictated by the major version.

Version	Changes	Author(s)	Approver
1.0	Original publication consistent with WEM Rules effective 1 September 2019.	Stuart MacDougall	Mark Katsikandarakis
1.1	New functionality added to distinguish between prudentials and settlements. Update of Interest formulae for settlements. Inclusion of Additional Repaid Amounts to be compliant with WEM Rule 9.24.2(b). Correction of SOMS_F_I(f, i) formulae for the Notional Wholesale Meter. Minor changes in formulae or invocation to improve performance.	Stuart MacDougall	Mark Katsikandarakis
2.0	Consequential changes due to new WEM Rules effective 22 February 2020.	Stuart MacDougall	Mark Katsikandarakis
3.0	Consequential changes due to Coordinator fees in new WEM Rules effective 1 July 2021.	Lisa Laurie	Mark Katsikandarakis
4.0	Consequential changes due to new WEM Rules effective 1 October 2021.	Stuart MacDougall	Mark Katsikandarakis
4.1	Inclusion of Default Levy Adjustment to be compliant with WEM Rule 9.24.9(e).	Lisa Laurie	Mark Katsikandarakis
5.0	Publication consistent with WEM Reform Rules effective 1 October 2023.	Stuart MacDougall Lisa Laurie	Nicholas Nielsen

# 1 Introduction

The purpose of this document is to:

- outline WEM Metering, Settlement and Prudential calculations as equations;
- provide additional context or structure equations in such a way that assists in understanding; and
- outline the formulation of a system that could be used to perform both settlement and prudential functions.

This document defines many variables that are used in equations. Each variable will have the following attributes stated to assist in understanding:

Attribute	Explanation	Example
Variable	The name of the variable	<i>STEMP_G_I</i>
Units	\$, {}, MW, MWh, MWs, \$/MW, \$/MWh, Flag, °C, Hz/s	\$/MWh
Scope (SC)	Tranche (T), Channel (CH), NMI (N), Contract(C), SESSM Award (SA), Essential System Service (E), Facility-Essential System Service (FE), Network Contingency (NC), Facility-Network Contingency (FNC), Capacity Credit Allocation (A), Separately Certified Component (SCC), Facility (F), Participant (P), Global (G)	G
Granularity (GR)	Dispatch Interval (DI), Trading Interval (I), Trading Day (D), Trading Week (W*), Trading Month (M), Capacity Year (CY), Financial Year (FY), Independent from time (X)	I
Rule	WEM Rule reference	6.9.7
Description	A description of the variable	STEM Clearing Price for Trading Interval i
Ref	Either the equation number where it is defined in this document, or 'I' to denote an input	I

\* Trading Week granularity will include a numeric suffix that indicates on which day of the week the Trading Week commences on i.e. 0 = Sunday, 1 = Monday, ... 4 = Thursday etc. This suffix will be included where the granularity is used but not in the variable name e.g. *ESTIMATIONFlag-G-W(w)* and not *ESTIMATIONFlag-G-W0(w)*.

Granularity has a strict hierarchy: a Capacity Year is comprised of Trading Months which are comprised of Trading Days which are comprised of Trading Intervals which are comprised of Dispatch Intervals. Some variables have no time component, for example, they relate purely to a contract. In this instances the granularity is denoted as X. This hierarchy is represented in Figure 1.

When defining a variable, it will always be defined for its granularity. For example, the variable *IRCR\_P\_M(p, m)* is defined for a particular Trading Month m. It will only be defined by variables with a granularity of Trading Month or coarser. However, when the variable is used to define other equations it may be expressed using a granularity finer than its granularity, for example *IRCR\_P\_M(p, d)*. When the variable is expressed like this, it is implicit that it refers to the Trading Month m, in which Trading Day d falls.

A similar hierarchy (and convention) is adopted for scopes as illustrated by Figure 2.

Figure 1: Granularity hierarchy

Figure 2: Scope hierarchy

## 2 Defined Terms, Sets and Associations

Defined terms are used throughout the rules. These defined terms often convey specific information, for example the term Scheduled Facility requires the facility to be registered with AEMO as outlined in the definition. Similarly, some specific calculations only apply, or are interpreted based on these defined terms. In the implementation, these defined terms are often represented as a set of Facilities (or Participants) that meet the definition of the defined term. Furthermore, there are often associations between defined terms within the rules, for example Facilities are associated to participants through registration.

This document defines all sets with the following conventions:

- The definition of each set variable is always Global and for a Trading Day and therefore the variable name omits information about scope and granularity. For example the set of Scheduled Facilities in Trading Day d is represented as  $SF(d)$ , rather than being named  $SF\_G\_D(d)$ .
- Subsets are defined by adding a scope argument. For example  $SF(p, d)$  represents the subset of  $SF(d)$  associated with participant p.

### 2.1 Participant Sets

#### 2.1.1 Axiomatic Participant Sets in AEMO systems

Calculations defined in the rules depend on different sets of participants. The participant sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO’s systems have been created. Sets which are calculated later are often sets of participants which are defined in the rules, and in these instances the rule reference is provided.

Variable	Units	SC	GR	Rule	Description	Ref
WEMS_MP(d)	{}	G	D		Set of participants with MP participant class in WEMS in Trading Day d	I
WEMS_NO(d)	{}	G	D		Set of participants with NO participant class in WEMS in Trading Day d	I
WEMS_PREG(d)	{}	G	D		Set of participants registered in WEMS in Trading Day d	I

#### 2.1.2 Sets of Rule Participant classes

The following are classes of Rule Participants [MR 2.28.1]:

- Network Operator (NO)
- Market Participant (MP)
- AEMO (AEMO)

The diagram below shows the relationship between Rule Participant classes (purple) and other sets of participants (green).

These sets are defined as follows:

$$P\_M(m) = \bigcup_{d \in D(m)} P(d) \quad (1)$$

$$P\_CY(cy) = \bigcup_{d \in D\_CY(cy)} P(d) \quad (2)$$

$$P(d) = COORDINATOR(d) \cup ERA(d) \cup RP(d) \quad (3)$$

$$COORDINATOR(d) = \{COE\} \quad (4)$$

$$ERA(d) = \{ERA\} \quad (5)$$

$$WPNTWK(d) = \{WPNTWK\} \quad (6)$$

$$RP(d) = MP(d) \cup NO(d) \cup AEMO(d) \quad (7)$$

$$MP(d) = WEMS\_PREG(d) \cap WEMS\_MP(d) \quad (8)$$

$$AEMO(d) = \{IMOWA\} \quad (9)$$

$$NO(d) = WEMS\_PREG(d) \cap WEMS\_NO(d) \quad (10)$$

Variable	Units	SC	GR	Rule	Description	Ref
P_M(m)	{}	G	M		Set of participants (Rule Participants, ERA and the Coordinator) in Trading Month m	(1)
P_CY(cy)	{}	G	CY		Set of participants (Rule Participants, ERA and the Coordinator) in Capacity Year cy	(2)
P(d)	{}	G	D		Set of participants (Rule Participants, ERA and the Coordinator) in Trading Day d	(3)
COORDINATOR(d)	{}	G	D	11	Set containing the Coordinator	(4)
ERA(d)	{}	G	D	11	Set containing the ERA	(5)

RP(d)	{}	G	D	11	Set of Rule Participants in Trading Day d	(7)
MP(d)	{}	G	D	11	Set of Market Participants in Trading Day d	(8)
AEMO(d)	{}	G	D	11	Set containing the AEMO	(9)
NO(d)	{}	G	D	11	Set containing Network Operators in Trading Day d	(10)
WEMS_MP(d)	{}	G	D		Set of participants with MP participant class in WEMS in Trading Day d	I
WEMS_NO(d)	{}	G	D		Set of participants with NO participant class in WEMS in Trading Day d	I
WEMS_PREG(d)	{}	G	D		Set of participants registered in WEMS in Trading Day d	I
D(w)	{}	G	W0		Set of Trading Days in Trading Week w	I
D_CY(cy)	{}	G	CY		Set of Trading Days in Capacity Year cy	I

## 2.2 Facility Sets

### 2.2.1 Axiomatic Facility Sets in AEMO systems

Calculations defined in the rules depend on different sets of Facilities. The Facility sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO's systems have been created. Sets which are calculated later are often sets of Facilities which are defined in the rules, and in these instances the rule reference is provided.

Variable	Units	SC	GR	Rule	Description	Ref
WEMS_DSP(d)	{}	G	D		Set of Facilities with a DSP WEMS Type in Trading Day d	I
WEMS_SF(d)	{}	G	D		Set of Facilities with a SF WEMS Type in Trading Day d	I
WEMS_SSF(d)	{}	G	D		Set of Facilities with a SSF WEMS Type in Trading Day d	I
WEMS_NSF(d)	{}	G	D		Set of Facilities with a NSF WEMS Type in Trading Day d	I
WEMS_IL(d)	{}	G	D		Set of Facilities with a IL WEMS Type in Trading Day d	I
WEMS_N(d)	{}	G	D		Set of Facilities with a N WEMS Type in Trading Day d	I
WEMS_NDL(d)	{}	G	D		Set of Facilities with a NDL WEMS Type in Trading Day d	I
NDL_MTR(d)	{}	G	D		Set of Non-Dispatchable Loads with interval meters that are not in WEMS in Trading Day d	I
WEMS_FREG(d)	{}	G	D		Set of Facilities with a registered status in WEMS in Trading Day d	I
WEMS_IM(d)	{}	G	D		Set of Facilities with an intermittent load status in WEMS in Trading Day d	I
WEMS_EG(d)	{}	G	D		Set of Facilities in WEMS that serve an Intermittent Load in Trading Day d	I
NOINTMETER(d)	{}	G	D		Set of Facilities in WEMS for which no interval meter exists in Trading Day d	I
CCF(d)	{}	G	D		Set of Facilities with Capacity Credits on Trading Day d	I
NMI(d)	{}	G	D		Set of all connection points in Trading Day d	I
RCM_SF(d)	{}	G	D		Set of Facilities with an indicative SF RCM Type in Trading Day d	I
RCM_SSF(d)	{}	G	D		Set of Facilities with an indicative SSF RCM Type in Trading Day d	I
RCM_NSF(d)	{}	G	D		Set of Facilities with an indicative NSF RCM Type in Trading Day d	I
RCM_DSP(d)	{}	G	D		Set of Facilities with an indicative DSP RCM Type in Trading Day d	I

### 2.2.2 Sets of Facility Technology Types and Facility Classes

The following are Facility Technology Types [MR 2.29.1]:

- distribution system (DX)
- transmission system (TX)
- Intermittent Generating System (IG)
- Non-Intermittent Generating System (NIG)
- Electric Storage Resource (ESR)
- Load (LOAD)

The following are Facility Classes [MR 2.29.1A]:

- Network (NTWK)
- Scheduled Facility (SF)
- Semi-Scheduled Facility (SSF)
- Non-Scheduled Facility (NSF)
- Interruptible Load (IRL)
- Demand Side Programme (DSP)

These sets are defined as follows.

$$DSP(d) = WEMS\_FREG(d) \cap WEMS\_DSP(d) \quad (11)$$

$$indDSP(d) = \overline{WEMS\_FREG(d)} \cap RCM\_DSP(d) \quad (12)$$

$$SF(d) = WEMS\_FREG(d) \cap WEMS\_SF(d) \quad (13)$$

$$indSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_SF(d) \quad (14)$$

$$SSF(d) = WEMS\_FREG(d) \cap WEMS\_SSF(d) \quad (15)$$

$$indSSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_SSF(d) \quad (16)$$

$$NSF(d) = WEMS\_FREG(d) \cap WEMS\_NSF(d) \quad (17)$$

$$indNSF(d) = \overline{WEMS\_FREG(d)} \cap RCM\_NSF(d) \quad (18)$$

$$IRL(d) = WEMS\_FREG(d) \cap WEMS\_IL(d) \quad (19)$$

$$NDL\_WEMS(d) = WEMS\_FREG(d) \cap WEMS\_NDL(d) \quad (20)$$

$$NOTIONAL(d) = \{NOTIONAL\} \quad (21)$$

$$NTWK(d) = WEMS\_FREG(d) \cap WEMS\_N(d) \quad (22)$$

NDL_MTR(d)	{}	G	D		Set of Non-Dispatchable Loads with interval meters that are not in WEMS in Trading Day d	I

### 2.2.3 Other Facility Sets

Additional sets of Facilities are required by the rules and are defined below.

$$REG\_F(d) = DSP(d) \cup SF(d) \cup SSF(d) \cup NSF(d) \cup IRL(d) \cup NTWK(d) \quad (23)$$

$$NDL(d) = NDL\_WEMS(d) \cup NDL\_MTR(d) \cup NOTIONAL(d) \quad (24)$$

$$Typical\_REGF(d) = (SF(d) \cup SSF(d) \cup NSF(d)) \cap \overline{EG(i)} \quad (25)$$

$$IML(d) = (IRL(d) \cup NDL\_WEMS(d)) \cap WEMS\_IM(d) \quad (26)$$

$$EG(d) = WEMS\_FREG(d) \cap WEMS\_EG(d) \quad (27)$$

Variable	Units	SC	GR	Rule	Description	Ref
REG_F(d)	{}	G	D	11	Set of Registered Facilities in Trading Day d	(23)
NDL(d)	{}	G	D	11	Set of Non-Dispatchable Loads in Trading Day d	(24)

## 2.4 Associations

Associations are used to link two entities to each other. These associations are used in the document for the following purposes:

- To reference a variable or attribute that applies to the parent of a child by relying on the primary or additional associations listed below e.g.  $UOOM\_FI(t, i)$  is referring to the  $UOOM\_FI$  quantity for the Facility that is associated with tranche t.
- To reference a Facility or NMI associated with an Intermittent Load by relying on the additional associations listed below e.g.  $NMI(IML2RG(f, i), i)$  is referring to the set of NMIs that are associated with the Remote Generator that is associated with Intermittent Load f.

### 2.4.1 Primary Associations

Association	Child SC	Parent SC	Description
F2P	F	P	Association between Facility f and participant p
N2F	N	F	Association between NMI n and Facility f (excluding DSPs)
SCC2F	SCC	F	Association between Separately Certified Component scc and Facility f
CH2N	CH	N	Association between channel ch and NMI n
C2P	C	P	Association between contract c and participant p
A2F	A	F	Association between a Capacity Credit Allocation a and Facility f
SA2FE	SA	FE	Association between a SESSM Award sa and a Facility f and Essential System Service e

#### 2.4.2 Additional Associations

Association	Child SC	Parent SC	Description
IML2EG	F	F	Association between Intermittent Load f and any embedded generator
IML2NS	N	F	Association between Intermittent Load f and any separately metered NMI that is measured by another connection point
A2PM	A	P	Association between Capacity Credit Allocation a and the Market Participant making the allocation
A2PR	A	P	Association between Capacity Credit Allocation a and the Market Participant receiving the allocation
T2F	T	F	Association between a price-quantity pair and the Facility associated with the price-quantity pair
T2P	T	P	Associations between a price-quantity pair and the participant associated with the price-quantity pair

### 3 Metering Calculation Engine

Metering calculations are fundamental to settlement and prudential calculations. Due to the large volumes of data, metering calculations are separated from the main calculation engine.

Metered Schedules are calculated for:

- Non-Dispatchable Loads (excluding those represented by the Notional Wholesale Meter)
- Scheduled Facilities
- Semi-Scheduled Facilities
- Non-Scheduled Facilities
- Notional Wholesale Meter

In order to determine these Metered Schedules the following information is required:

- Connection point energy quantities
- Facility category
- Facility aggregation requirements

The purpose of this section is to define Sent Out Metered Schedules (non-loss adjusted energy) and Metered Schedules (loss adjusted energy) for each category of facility defined in the registration chapter. The Metered Schedules and Sent Out Metered Schedules for unregistered NDLs are the same as the connection point’s Metered Schedules as defined previously. Intermittent Load facilities Metered Schedules do not use the same variables as all other facilities. These Metered Schedules are detailed in their own section.

The equations in the following sections incorporate the concept of Aggregated Facilities [MR 2.30], which is a Registered Facility with more than one connection point.

When estimating meter data, AEMO uses more general metering equations to incorporate estimation methodology. When actual data is available, the equations simplify to the previously outlined metering equations. The more general metering equations are detailed in the subsequent subsections.

#### 3.1 Invocation

The following table outlines the invocation for the high-level calculations.

Variable	Scope Set
$MS\_FI(n, i)$	$\forall f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL(i)$
$SOMS\_FI(f, i)$	$\forall f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL(i)$

Variable	Units	SC	GR	Rule	Description	Ref
$MS\_FI(f, i)$	MWh	F	I	9.3.4, 2.30B.10(c), 2.30B.12	Metered Schedule for Facility f in Trading Interval i	(31)
$SOMS\_FI(f, i)$	MWh	F	I		Sent Out Metered Schedule for Facility f in Trading Interval i	(32)
$SF(d)$	{}	G	D	11	Set of Scheduled Facilities in Trading Day d	(13)

$NDL(d)$	{}	G	D	11	Set of Non-Dispatchable Loads in Trading Day d	(24)

### 3.2 Connection Point Energy Quantities

Western Power is a Metering Data Agent and provides AEMO with:

- Meter energy data (kWh); and
- Meter standing data (Participant, TLF, DLF).

Each connection point is assigned a NMI (National Meter Identifier).

For any single Trading interval, a NMI may have multiple meter channels that measure and store energy data. The type of data varies; however, the channels containing energy data relevant to AEMO are B channels which measure generation; and E channels which measure consumption.

The image below shows a sample of energy data received from Western Power. In this example it shows that NMI 8001000347 had 9.600 kWh of consumption for Trading Interval 03:30 on its E1 channel.

```

  </Transactions>

```

Some specific items of note:

- Standing Data only provides data at a specific point in time - i.e. no historical data is stored in the file. Therefore AEMO's databases must consider how it will maintain historical information.
- The TLF is sent to AEMO against the TransmissionNodeIdentifier attribute. Market Participants (other than AEMO) receive files with the Transmission Network Identifier (TNI) in this field, and they do not receive TLFs. A TLF can be derived from a TNI and historical metering data.

Each NMI  $n$  has a non-loss adjusted energy quantity associated with it for every Trading Interval  $i$ .

Facilities without an interval meter (i.e. SCADA-only facilities) have the identical NMI name and Facility name in AEMO's systems (e.g.  $n = \text{COLLIE\_G1}$ ,  $f = \text{COLLIE\_G1}$ ).

$$\text{MeterData}_{N_I}(n, i) = \begin{cases} \text{SCADA\_FI}(n, i) & \text{for } n \in \text{NOINTMETER}(i) \\ \text{netMQ}_{N_I}(n, i) & \text{for } n \notin \text{NOINTMETER}(i) \end{cases} \quad (28)$$

$$\text{netMQ}_{N_I}(n, i) = \sum_{ch \in B(n, i)} \text{MQ}_{CH_I}(ch, i) - \sum_{ch \in E(n, i)} \text{MQ}_{CH_I}(ch, i) \quad (29)$$

$$\text{estMeterData}_{N_I}(n, i) = \text{MeterData}_{N_I}(n, \text{LDLP}_{N_I}(n, i)) \times \text{SF}_{N_I}(n, i) \quad (30)$$

### 3.3 Metered Schedules (including estimation)

Metered Schedules are required to be estimated for the purposes of determining a Market Participant's Outstanding Amount.

When a Metered Schedule does not exist because data is yet to be provided by the Meter Data Agent, an estimation methodology is used to scale data from a similar period, depending on what data is available. The following sections outline:

- the estimation methodology consistent with the requirements in WEM Procedure: Prudential Requirements.
- how data statuses are used to indicate if data exists;
- how a similar interval is determined using a 'Like Day, Like Period' methodology; and
- how scaling factors are used.

#### 3.3.1 Standard Metered Schedules (including estimation)

Meter Schedules are determined or estimated based on what data is available. The general philosophy for what data to use is based on the following hierarchy as dictated by the WEM Procedure: Prudential Requirements:

1. Use *MeterData\_N\_I* data for the entire Facility, if *MeterData\_N\_I* data exists for any NMI associated with Facility f, for Trading Interval i
2. Use SCADA energy data if it exists for Facility f, for Trading Interval i
3. Use EOI Quantity if it exists for Facility f, for Trading Interval i
4. Scale *MeterData\_N\_I* data for Facility f in the most recent similar interval of Trading Interval i

$$MS\_F\_I(f, i) = \begin{cases} SOMS\_N\_I(f, i) \times TLF\_N\_D(f, i) \times DLF\_N\_D(f, i) & \text{for } f \in NDL\_MTR(i) \\ SOMS\_F\_I(f, i) \times TLF\_F\_D(f, i) \times DLF\_F\_D(f, i) & \text{for } f \in Typical\_REGF(i) \cup (NDL\_WEMS(i) \cap \overline{IML(i)}) \\ MSIL\_F\_I(f, i) + MSEL\_F\_I(f, i) & \text{for } f \in IML(i) \\ MSEG\_F\_I(EG2IML(f, i), i) & \text{for } f \in EG(i) \\ -1 \times \sum_{f \in SF(i) \cup SSF(i) \cup NSF(i) \cup NDL \cap NOTIONAL(i)} MS\_F\_I(f, i) & \text{for } f \in NOTIONAL(i) \\ 0 & \text{otherwise} \end{cases} \quad (31)$$

### 3.3.2 Intermittent Load Metered Schedules (including estimation)

An Intermittent Load comprises the following components that are all measured by the single connection point associated with the Intermittent Load:

- Intermittent load associated with Load f
- Embedded Load (non-Intermittent Load) that is non-Intermittent Load f
- Generation associated with a Registered Facility  $IML2EG(f, d)$

The Metered Schedule calculations are different depending on whether the Intermittent Load existed prior to New WEM Commencement Day (Legacy Intermittent Load) or not (New Intermittent Load). The figure below is a graphical representation of this configuration.

The purpose of this section is to define the Metered Schedule Quantities for each of the components. To do this, various standing data relating to the Intermittent Load and the embedded generator is used; however, the first step is to perform the following preliminary calculations to derive  $AMQ_{FI}$ .

Note, that the equations (35), (37) and (39) refer to more generalised equations (36), (38) and (40) to handle prudentials as well as settlement.

The net metered quantity associated with the Intermittent Load is calculated:

$$NNMQ_{FI}(f, i) = \sum_{n \in NMI(f, i)} MeterData_{NI}(n, i) \quad (35)$$

$$estNNMQ_{FI}(f, i) = \sum_{n \in NMI(f, i)} estMeterData_{NI}(n, i) \quad (36)$$

$$NMQ_{FI}(f, i) = NNMQ_{FI}(f, i) \times TLF_{FD}(f, i) \times DLF_{FD}(f, i) \quad (37)$$

$$estNMQ_{FI}(f, i) = estNNMQ_{FI}(f, i) \times TLF_{FD}(f, i) \times DLF_{FD}(f, i) \quad (38)$$

The meter data associated with each individual NMI that is separately metered (and settled) associated with the Intermittent Load is calculated:

$$NS_{FI}(f, i) = \sum_{n \in NS(f, i)} MeterData_{NI}(n, i) \times TLF_{ND}(n, i) \times DLF_{ND}(n, i) \quad (39)$$

$$estNS_{FI}(f, i) = \sum_{n \in NS(f, i)} estMeterData_{NI}(n, i) \times TLF_{ND}(n, i) \times DLF_{ND}(n, i) \quad (40)$$

Any separately metered (and settled) quantities associated with the Intermittent Load are removed to determine AMQ.

$$AMQ_{FI}(f, i) = \begin{cases} NMQ_{FI}(f, i) - NS_{FI}(f, i) & \text{if } AfterIMDFlag_{GD}(i) = 1 \text{ or } isData_{FI}(f, i) > 0 \\ SCADA_{FI}(f, i) & \text{elseif } SCADANullFlag_{GD}(i) = 0 \\ 0.5h \times SCADAEOI_{FI}(f, i) & \text{elseif } EOINullFlag_{GD}(i) = 0 \\ estNMQ_{FI}(f, i) - estNS_{FI}(f, i) & \text{otherwise} \end{cases} \quad (41)$$

Then the  $AMQ\_F\_I$  value is split into three components based on whether it existed prior to New WEM Commencement Day, the standing data of the Intermittent Load or its associated embedded generator.

For Legacy Intermittent Loads:

- If  $AMQ\_F\_I$  is positive (generating), then the generation is attributed to the embedded generator up until its maximum sent out generation, with any excess generation being attributed to the Intermittent Load Metered Schedules.
- If  $AMQ\_F\_I$  is negative (consuming), then the consumption is attributed to the embedded load up until its maximum non-intermittent consumption, with any excess consumption being attributed to the Intermittent Load Metered Schedules.

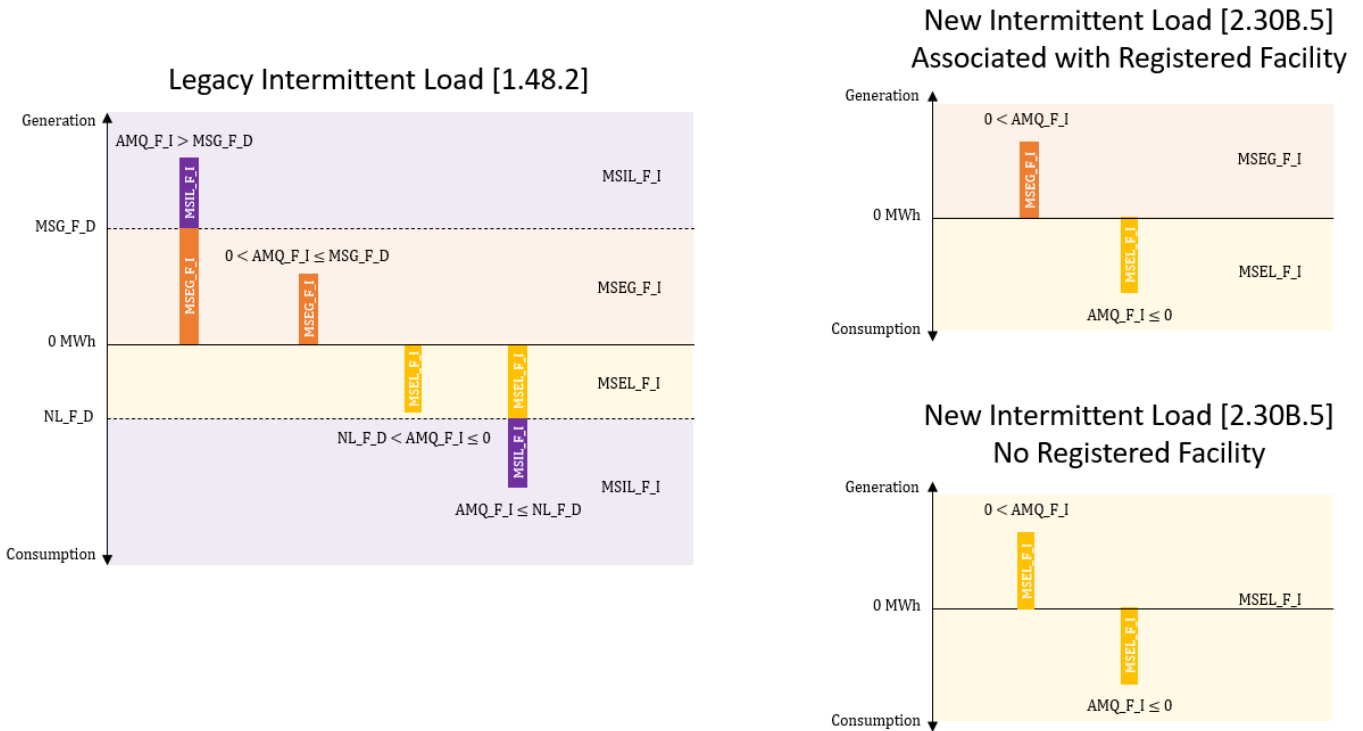

For New Intermittent Loads that are associated with a Registered Facility:

- If  $AMQ\_F\_I$  is positive (generating), then the generation is attributed to the embedded generator.
- If  $AMQ\_F\_I$  is negative (consuming), then the consumption is attributed to the embedded load.

For New Intermittent Loads that are not associated with a Registered Facility:

- $AMQ\_F\_I$  is attributed to the embedded load.

The diagram below illustrates this concept.

Mathematically, this is achieved by performing the following calculations.

The maximum non-intermittent Load associated with Intermittent load f is determined as:

$$NL\_F\_D(f, d) = -NLstanding\_F\_D(f, d) \times TLF\_F\_D(f, d) \times DLF\_F\_D(f, d) \quad (42)$$

The maximum Sent Out Generation for an embedded generator, e, associated with Intermittent Load f is determined as:

$$MSGEG\_F\_D(f, d) = MSG\_F\_D(IML2EG(f, d), d) \quad (43)$$

$$MSG\_F\_D(f, d) = 0.5h \times SOC\_F\_D(f, d) \times TLF\_F\_D(f, d) \times DLF\_F\_D(f, d) \quad (44)$$

$$SOC\_F\_D(f, d) = \max(0, MSOC\_F\_D(f, d)) \quad (45)$$

Although the equations in the rules for Legacy Intermittent Loads are written differently to the equations below, they are mathematically equivalent.

$$MSEL\_FI(f, i) = \begin{cases} \min(0, \max(NL\_FD(f, i), AMQ\_FI(f, i))) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ \min(0, AMQ\_FI(f, i)) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is not NULL} \\ AMQ\_FI(f, i) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is NULL} \end{cases} \quad (46)$$

$$MSEG\_FI(f, i) = \begin{cases} \max(0, \min(MSGEG\_FD(f, i), AMQ\_FI(f, i))) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ \max(0, AMQ\_FI(f, i)) & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is not NULL} \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is NULL} \end{cases} \quad (47)$$

$$MSIL\_FI(f, i) = \begin{cases} AMQ\_FI(f, i) - MSEL\_FI(f, i) - MSEG\_FI(f, i) & \text{for } f \in IML(i) \cap LegacyIML(i) \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is not NULL} \\ 0 & \text{for } f \in IML(i) \cap \overline{LegacyIML(i)} \\ & \text{and } IML2EG(f, i) \text{ is NULL} \end{cases} \quad (48)$$

The non-loss adjusted Metered Schedules for Embedded Load and Embedded Generator and Intermittent Load are defined as:

$$SOMSEL\_FI(f, i) = \frac{MSEL\_FI(f, i)}{TLF\_FD(f, i) \times DLF\_FD(f, i)} \quad (49)$$

$$SOMSEG\_FI(f, i) = \frac{MSEG\_FI(f, i)}{TLF\_FD(f, i) \times DLF\_FD(f, i)} \quad (50)$$

$$SOMSIL\_FI(f, i) = \frac{MSIL\_FI(f, i)}{TLF\_FD(f, i) \times DLF\_FD(f, i)} \quad (51)$$

### 3.3.4 Like Day, Like Period (LDLP)

A 'Like Day' of Trading Interval  $i$  is defined as follows:

- If  $i$  falls on a Trading Day  $d$  that is a Public Holiday, then a 'Like Day' is any Trading Day that is a Sunday.
- If  $i$  falls on a Trading Day  $d$  that is not a public holiday, then a 'Like Day' is any Trading Day that is not a Public Holiday and is the same day of the week as  $d$ .

The set of Trading Days that are a 'Like Day' of Trading Interval  $i$  is infinitely large. For the purposes of estimation, the set of Like Days we will use will be defined as the union of:

- the set of Like Days that occur after the last Trading Day for which the relevant Interval Meter Deadline has passed; and
- the set containing the most recent Like Day for which the relevant Interval Meter Deadline has passed.

A 'Like Period' of Trading Interval  $i$  is defined as any Trading Interval that is the same time of day as  $i$ .

A 'Like Day, Like Period' of  $i$ , is defined as a Trading Interval that both falls on a 'Like Day' of  $i$  and is a 'Like Period' of  $i$ .

$$LDLP(i) = \text{The set of 'Like Day, Like Periods' of } i \text{ as illustrated in the description above and table below.} \quad (54)$$

$LDLP(i)$  set is ordered from most recent interval to least recent interval.  $LDLP(i)[1]$  refers to the most recent interval in the set and  $LDLP(i)[j]$  refers to the least recent interval in the set.

Refer to the table below for examples illustrating  $LDLP(i)$  for estimating Trading Interval  $i$  when the calculation is performed at time  $j$ .

#	$i @ j$	$LDLP(i) @ j$	Purpose of example
1	20:30 Fri 03 May 2019 calculated @ 23:59 01 May 2019	{20:30 Fri 26 Apr 2019, 20:30 Fri 19 Apr 2019, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019, 20:30 Fri 22 Mar 2019, 20:30 Fri 15 Mar 2019, 20:30 Fri 08 Mar 2019, 20:30 Fri 01 Mar 2019, 20:30 Fri 22 Feb 2019}	Shows omission of Public Holidays (Good Friday) when $i$ is not a Public Holiday.
2	20:30 Fri 03 May 2019 calculated @ 00:00 02 May 2019	{20:30 Fri 26 Apr 2019, 20:30 Fri 19 Apr 2019, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019}	Compare with example 1 to show effect of calculating after the Interval Meter Deadline for Trading Month March 2019 on 8 May 2019.

#	i @ j	LDLP(i) @ j	Purpose of example
3	08:00 Thu 25 Apr 2019 calculated @ 13:00 27 Apr 2019	{08:00 Sun 21 Apr 2019, 08:00 Sun 14 Apr 2019, 08:00 Sun 07 Apr 2019, 08:00 Sun 31 Mar 2019, 08:00 Sun 24 Mar 2019, 08:00 Sun 17 Mar 2019, 08:00 Sun 10 Mar 2019, 08:00 Sun 03 Mar 2019, 08:00 Sun 24 Feb 2019}	Shows example when i falls on a Trading Day that is a Public Holiday (ANZAC Day).
4	07:30 Thu 25 Apr 2019 calculated @ 13:00 27 Apr 2019	{07:30 Thu 18 Apr 2019, 07:30 Thu 11 Apr 2019, 07:30 Thu 04 Apr 2019, 07:30 Thu 28 Mar 2019, 07:30 Thu 21 Mar 2019, 07:30 Thu 14 Mar 2019, 07:30 Thu 07 Mar 2019, 07:30 Thu 28 Feb 2019}	Compare with example 3 to show distinction between a Trading Day that is a Public Holiday and a calendar day that is a Public Holiday.

In subsequent sections,  $LDLP\_NI(n, i)$  will be used as the inputs to functions that expect a single Trading Interval (and not a set of Trading Intervals). The purpose of this variable is to return the interval itself, if data is available, otherwise to return the most recent interval in the set  $LDLP(i)$ , for which data exists. This is defined mathematically in the equations below.

$$LDLP\_NI(n, i) = \begin{cases} i & \text{if } isData\_NI(n, i) = 1 \text{ or } AfterIMDFlag\_GD(i) = 1 \\ LDLP(i)[1] & \text{elseif } isData\_NI(n, LDLP(i)[1]) = 1 \\ LDLP(i)[2] & \text{elseif } isData\_NI(n, LDLP(i)[2]) = 1 \\ \vdots & \vdots \\ LDLP(i)[j-1] & \text{elseif } isData\_NI(n, LDLP(i)[j-1]) = 1 \\ LDLP(i)[j] & \text{otherwise} \end{cases} \quad (55)$$

Variable	Units	SC	GR	Rule	Description	Ref
LDLP\_NI(n, i)		N	I		The interval used to determine scaled meter data for NMI n in Trading Interval i	(55)

$MSNDL\_P\_I(p, i)$	MWh	P	I		Sum of all Non-Dispatchable Load Metered Schedules for Market Participant p in Trading Interval i	(59)
$DSPL\_F\_I(f, i)$	MWh	F	I	9.5.4	Demand Side Programme Load for Facility f in Trading Interval i	(60)
$SOMS\_G\_I(i)$	MWh	G	I	11	Total Sent Out Generation in Trading Interval i	(61)
$DSP(d)$	{}	G	D	11	Set of Demand Side Programmes in Trading Day d	(11)
$P(d)$	{}	G	D		Set of participants (Rule Participants, ERA and the Coordinator) in Trading Day d	(3)

#### 3.4.2 CCQNDL\_P\_I

$$CCQNDL\_P\_I(p, i) = \sum_{f \in NDL(p, i)} \min(0, MS\_F\_I(f, i)) \quad (57)$$

Variable	Units	SC	GR	Rule	Description	Ref
$CCQNDL\_P\_I(p, i)$	MWh	P	I		Sum of all Non-Dispatchable Load Metered Schedules that are negative for participant p in Trading Interval i	(57)
$MS\_F\_I(f, i)$	MWh	F	I	9.3.4, 2.30B.10(c), 2.30B.12	Metered Schedule for Facility f in Trading Interval i	(31)
$NDL(d)$	{}	G	D	11	Set of Non-Dispatchable Loads in Trading Day d	(24)

### 3.4.3 ABSNDL\_P\_I

$$ABSNDL\_P\_I(p, i) = \sum_{f \in NDL(p, i)} |MS\_F\_I(f, i)| \quad (58)$$

Variable	Units	SC	GR	Rule	Description	Ref
ABSNDL_P_I(p, i)	MWh	P	I		Sum of the absolute value of Metered Schedules for all Non-Dispatchable Loads for participant p in Trading Interval i	(58)
MS_F_I(f, i)	MWh	F	I	9.3.4, 2.30B.10(c), 2.30B.12	Metered Schedule for Facility f in Trading Interval i	(31)
NDL(d)	{}	G	D	11	Set of Non-Dispatchable Loads in Trading Day d	(24)

### 3.4.4 MSNDL\_P\_I

$$MSNDL\_P\_I(p, i) = \sum_{f \in NDL(p, i)} MS\_F\_I(f, i) \quad (59)$$

Variable	Units	SC	GR	Rule	Description	Ref
MSNDL_P_I(p, i)	MWh	P	I		Sum of all Non-Dispatchable Load Metered Schedules for Market Participant p in Trading Interval i	(59)
MS_F_I(f, i)	MWh	F	I	9.3.4, 2.30B.10(c), 2.30B.12	Metered Schedule for Facility f in Trading Interval i	(31)
NDL(d)	{}	G	D	11	Set of Non-Dispatchable Loads in Trading Day d	(24)

### 3.4.5 DSPL\_F\_I

$$DSPL\_F\_I(f, i) = \sum_{n \in DSPNMI(f, i)} -SOMS\_N\_I(n, i) \quad (60)$$

Variable	Units	SC	GR	Rule	Description	Ref
DSPL_F_I(f, i)	MWh	F	I	9.5.4	Demand Side Programme Load for Facility f in Trading Interval i	(60)
SOMS_N_I(n, i)	MWh	N	I		Sent Out Metered Schedule (including estimation) for NMI n in Trading Interval i	(33)
NMI(d)	{}	G	D		Set of all connection points in Trading Day d	I

### 3.4.6 SOMS\_G\_I

$$SOMS\_G\_I(i) = \sum_{f \in SF(i) \cup USSF(i) \cup NSF(i)} \max(0, SOMS\_F\_I(f, i)) \quad (61)$$

Variable	Units	SC	GR	Rule	Description	Ref
SOMS_G_I(i)	MWh	G	I	11	Total Sent Out Generation in Trading Interval i	(61)
SOMS_F_I(f, i)	MWh	F	I		Sent Out Metered Schedule for Facility f in Trading Interval i	(32)

## 4 Calculation Engine

AEMO uses the same calculation engine for both settlement and prudentials. Settlement calculations are determined for a Trading Week; however, prudential calculations are determined for each Trading Day. Therefore, the common calculation engine has been implemented on a daily basis, and can then be aggregated to achieve the required settlement outputs.

### 4.1 Invocation

The following table outlines the invocation for the high-level calculations that occur after the metering calculations.

Variable	Scope Set
$TOTAL\_P\_D(p, d)$	$\forall d \in D(w)$
$SOMS\_G\_I(i)$	N/A

Variable	Units	SC	GR	Rule	Description	Ref
$TOTAL\_P\_D(p, d)$	\$	P	D		Total settlement amount (including GST and interest) for participant p in Trading Day d	(62)
$SOMS\_G\_I(i)$	MWh	G	I	11	Total Sent Out Generation in Trading Interval i	(61)
$D(w)$	{}	G	W0		Set of Trading Days in Trading Week w	I

### 4.2 Daily Aggregations

$$TOTAL\_P\_D(p, d) = NOINT\_P\_D(p, d) + NETINT\_P\_D(p, d) \quad (62)$$

$$NOINT\_P\_D(p, d) = NETSA\_P\_D(p, d) + SFMFSA\_P\_D(p, d) + SFRFSA\_P\_D(p, d) + SFCFSA\_P\_D(p, d) + GST\_P\_D(p, d) \quad (63)$$

Variable	Units	SC	GR	Rule	Description	Ref
$TOTAL\_P\_D(p, d)$	\$	P	D		Total settlement amount (including GST and interest) for participant p in Trading Day d	(62)
$NOINT\_P\_D(p, d)$	\$	P	D		Total settlement amount (including GST, excluding interest) for participant p in Trading Day d	(63)
$NETINT\_P\_D(p, d)$	\$	P	D		Net interest paid/charged to participant p for Trading Day d	(409)
$NETSA\_P\_D(p, d)$	\$	P	D	9.6.3	Net settlement amount for participant p in Trading Day d	(64)
$SFMFSA\_P\_D(p, d)$	\$	P	D	9.13.2	Service Fee Settlement Amount paid to AEMO for Trading Day d	(400)
$SFRFSA\_P\_D(p, d)$	\$	P	D	9.13.3	Service Fee Settlement Amount paid to the ERA for Trading Day d	(401)
$SFCFSA\_P\_D(p, d)$	\$	P	D	9.13.4	Service Fee Settlement Amount paid to the Coordinator for Trading Day d	(402)
$GST\_P\_D(p, d)$	\$	P	D		Net GST paid/charged to participant p for Trading Day d	(406)

#### 4.2.1 Net Settlement Amount

These equations are based on the equations stated in MR 9.6.

$$NETSA\_P\_D(p, d) = STEMSA\_P\_D(p, d) + RCSA\_P\_D(p, d) + RTESA\_P\_D(p, d) + ESSSA\_P\_D(p, d) + OCSA\_P\_D(p, d) + MPFSA\_P\_D(p, d) + DLASA\_P\_D(p, d) \quad (64)$$

Variable	Units	SC	GR	Rule	Description	Ref
NETSA_P_D(p, d)	\$	P	D	9.6.3	Net settlement amount for participant p in Trading Day d	(64)
STEMSA_P_D(p, d)	\$	P	D	9.7.2	Settlement amount for energy cleared in STEM for participant p in Trading Day d	(65)
RCSA_P_D(p, d)	\$	P	D	9.8.2	Reserve Capacity settlement amount for participant p in Trading Day d	(277)
RTESA_P_D(p, d)	\$	P	D	9.9.2	Real-Time Energy settlement amount for participant p in Trading Day d	(72)
ESSSA_P_D(p, d)	\$	P	D	9.10.2	Essential System Services settlement amount for participant p in Trading Day d	(101)
OCSA_P_D(p, d)	\$	P	D	9.11.2	Outage compensation settlement amount for participant p in Trading Day d	(95)
MPFSA_P_D(p, d)	\$	P	D	9.12.2	Market Participant Fee Settlement Amount charged to participant p for Trading Day d	(394)
DLASA_P_D(p, d)	\$	P	D	9.20.11(e)	Default Levy Adjustment settlement amount for participant p in Trading Day d	(403)

### 4.3 STEM

$$STEMSA\_P\_D(p, d) = STEMSAS\_P\_D(p, d) - STEMSAD\_P\_D(p, d) \quad (65)$$

Variable	Units	SC	GR	Rule	Description	Ref
STEMSA_P_D(p, d)	\$	P	D	9.7.2	Settlement amount for energy cleared in STEM for participant p in Trading Day d	(65)
STEMSAS_P_D(p, d)	\$	P	D	9.7	Settlement amount for energy sold in STEM for participant p in Trading Day d	(66)
STEMSAD_P_D(p, d)	\$	P	D	9.7	Settlement amount for energy purchased in STEM for participant p in Trading Day d	(67)

#### 4.3.1 STEM Payments and Charges

These equations are based on the equations stated in 9.7. They have been modified to separate quantities into payments and charges.

$$STEMSAS\_P\_D(p, d) = \sum_{i \in I(d)} STEMSAS\_P\_I(p, i) \quad (66)$$

$$STEMSAD\_P\_D(p, d) = \sum_{i \in I(d)} STEMSAD\_P\_I(p, i) \quad (67)$$

$$STEMSAS\_P\_I(p, i) = \begin{cases} STEMP\_G\_I(i) \times STEMSQ\_P\_I(p, i) & SSF\_G\_D(i) = 1 \\ 0 & SSF\_G\_D(i) = 0 \end{cases} \quad (68)$$

$$STEMSAD\_P\_I(p, i) = \begin{cases} STEMP\_G\_I(i) \times STEM DQ\_P\_I(p, i) & SSF\_G\_D(i) = 1 \\ 0 & SSF\_G\_D(i) = 0 \end{cases} \quad (69)$$

$$STEMSQ\_P\_I(p, i) = \max(0, STEMQ\_P\_I(p, i) \times SSF\_G\_D(i)) \quad (70)$$

$$STEMDQ\_P\_I(p, i) = -\min(0, STEMQ\_P\_I(p, i) \times SSF\_G\_D(i)) \quad (71)$$

Variable	Units	SC	GR	Rule	Description	Ref
STEMSAS_P_D(p, d)	\$	P	D	9.7	Settlement amount for energy sold in STEM for participant p in Trading Day d	(66)
STEMSAD_P_D(p, d)	\$	P	D	9.7	Settlement amount for energy purchased in STEM for participant p in Trading Day d	(67)
STEMSAS_P_I(p, i)	\$	P	I	9.7	Settlement amount for energy sold in STEM for participant p in Trading Interval i	(68)

## 4.6 Essential System Services

Essential System Services (ESS) encompasses all of Frequency Co-optimised Essential System Services (FCESS) and Non-Co-optimised Essential System Services (NCESS).

Essential System Services is split into the following parts:

- Contingency Raise payments, including SESSM Award payments and refunds
- Contingency Raise charges, including runway share
- Contingency Lower payments and charges
- RoCoF Control Service payments and charges, including Minimum RoCoF Requirement and Additional RoCoF Requirement
- Regulation Raise payments and charges
- Regulation Lower payments and charges
- Regulation Share
- System Restart Service payments and charges
- NCESS payments and charges
- FCESS Uplift payments, including Enablement Losses and FCESS Uplift shares

$$ESSSA\_P\_D(p, d) = ESSpayment\_P\_D(p, d) - ESScharge\_P\_D(p, d) \quad (101)$$

$$\begin{aligned} ESSpayment\_P\_D(p, d) = & CRpayment\_P\_D(p, d) + CLpayment\_P\_D(p, d) + RoCoFpayment\_P\_D(p, d) \\ & + RRpayment\_P\_D(p, d) + RLpayment\_P\_D(p, d) + SRSpayment\_P\_D(p, d) \\ & + NCESSpayment\_P\_D(p, d) + FCESSUpayment\_P\_D(p, d) \end{aligned} \quad (102)$$

$$\begin{aligned} ESScharge\_P\_D(p, d) = & CRcharge\_P\_D(p, d) + CLcharge\_P\_D(p, d) + RoCoFcharge\_P\_D(p, d) \\ & + RRcharge\_P\_D(p, d) + RLcharge\_P\_D(p, d) \\ & + SRSScharge\_P\_D(p, d) + NCESScharge\_P\_D(p, d) \end{aligned} \quad (103)$$

#### 4.6.1.1 SESSM Award Availability Payments

A SESSM Award is granted to a Market Participant in relation to a Facility to provide a specific FCESS.

In the first three years of operation of the market, a SESSM Award Duration is restricted to a maximum of 1 year and a maximum of 3 years thereafter.

A SESSM Award Duration is Trading Day based but may not align with a Trading Week or a Trading Month or a Capacity Year. A SESSM Award Duration is represented in the formulas as a Trading Day range, where the function  $SArange(sa)$  is used to return the full time range of the relevant SESSM Award i.e. from Trading Day, to Trading Day.

$$AP\_SA\_DI(sa, di) = \begin{cases} PDIAP\_SA\_X(sa, SArange(sa)) & AQ\_SA\_DI(sa, di) > 0 \\ 0 & \text{otherwise} \end{cases} \quad (112)$$

#### 4.6.2.2 Facility Runway Share

This section calculates the facility runway shares for Facilities deemed to be causers of Facility Contingencies. Each Facility is ranked in ascending order of their Facility Risk value and allocated a runway share based on that rank.

$$FRS\_F\_DI(f, di) = \sum_{r=1}^{FRrank\_F\_DI(f, di)} \left( \frac{FRisk\_F\_DI(AF[r], di) - FRisk\_F\_DI(AF[r-1], di)}{LFR\_G\_DI(di)} \right) \frac{1}{MAXr\_G\_DI(di) - r + 1}, \text{ where } FRisk\_F\_DI(AF[0], di) = 0 \quad (141)$$

$$FRrank\_F\_DI(f, di) = \text{Position of applicable facility } f \text{ in } AFOrdered\_G\_DI(di) \quad (142)$$

$$AFOrdered\_G\_DI(di) = AF\_DI(di) \text{ ordered by ascending } FRisk\_F\_DI(f, di) \text{ and then alphabetically} \quad (143)$$

The expression  $AF[r]$  returns the  $r$ -th element of the set  $AFOrdered\_G\_DI(di)$  and the following equation shows the interaction between  $AFOrdered\_G\_DI(di)$ ,  $FRrank\_F\_DI(f, di)$  and  $AF[r]$ :

$$AF[FRrank\_F\_DI(f, di)] = f \quad (144)$$

$$AF\_DI(di) = \{f \in App2AF\_DI(di) : FRisk\_F\_DI(f, di) \geq 10MW\} \quad (145)$$

$$AFadditional\_DI(di) = \{f \in App2AIML\_DI(di) : FRisk\_F\_DI(f, di) \geq 10MW\} \quad (146)$$

$$FRisk\_F\_DI(f, di) = \begin{cases} FR\_F\_DI(f, di) & \text{for } f \in App2AIML\_DI(di) \cup App2AFa(di) \cup App2AFb\_DI(di) \\ \frac{SCADAIML\_F\_DI(f, di - 1)}{5/60h} & \text{for } f \in App2AFc\_DI(di) \\ 0 & \text{otherwise} \end{cases} \quad (147)$$

$$App2AIML\_DI(di) = App2AFbc(d) \cap \overline{App2AF\_DI(di)} \quad (148)$$

$$App2AF\_DI(di) = App2AFa(di) \cup App2AFb\_DI(di) \cup App2AFc\_DI(di) \quad (149)$$

$$App2AFa(d) = (SF(d) \cup SSF(d)) \cap \overline{EG(d)} \quad (150)$$

$$App2AFbc(d) = ((SF(d) \cup SSF(d) \cup NSF(d)) \cap EG(d)) \cup IML(d) \quad (151)$$

$$App2AFb\_DI(di) = App2AFbc(d) \cap \overline{App2AFc\_DI(di)} \quad (152)$$

$$MAXr\_G\_DI(di) = |AF\_DI(di)| \quad (153)$$

$$LFR\_G\_DI(di) = FRisk\_F\_DI(AF[MAXr\_G\_DI(di)], di) \quad (154)$$

#### 4.6.2.3 Network Runway Share

This section calculates the Network Contingency runway shares for Registered Facilities deemed to be causers of Network Contingencies. Each Registered Facility that is a member of the set of causer facilities is ranked in ascending order of their Facility Risk value and allocated a runway share based on that rank.

$$\begin{aligned}
& NRS\_FNC\_DI(f, nc, di) \\
&= \sum_{r=1}^{NRrank\_FNC\_DI(f, nc, di)} \left( \frac{FRisk\_F\_DI(CF[r], di) - FRisk\_F\_DI(CF[r-1], di)}{LFR\_NC\_DI(nc, di)} \right) \cdot \frac{1}{MAXr\_NC\_DI(nc, di) - r + 1}, \text{ where } FRisk\_F\_DI(CF[0], di) = 0
\end{aligned} \tag{155}$$

$$NRrank\_FNC\_DI(f, nc, di) = \text{Position of Facility } f \text{ in } CF_{ordered\_NC\_DI}(nc, di) \tag{156}$$

$$CF_{ordered\_NC\_DI}(nc, di) = CF\_NC\_DI(nc, di) \text{ ordered by ascending } FRisk\_F\_DI(f, di) \text{ and then alphabetically} \tag{157}$$

The expression  $CF[r]$  returns the  $r$ -th element of the set  $CF_{ordered\_NC\_DI}(nc, di)$  and the following equation shows the interaction between  $CF_{ordered\_NC\_DI}(nc, di)$ ,  $NRrank\_FNC\_DI(f, nc, di)$  and  $CF[r]$ :

$$CF[NRrank\_FNC\_DI(f, nc, di)] = f \tag{158}$$

$$MAXr\_NC\_DI(nc, di) = |CF\_NC\_DI(nc, di)| \tag{159}$$

$$LFR\_NC\_DI(nc, di) = FRisk\_F\_DI(CF[MAXr\_NC\_DI(nc, di)], di) \tag{160}$$

$$CF\_NC\_DI(nc, di) = \{f \in F\_NC\_DI(nc, di) \cap (AF\_DI(di) \cup AF_{additional\_DI}(di))\} \tag{161}$$

#### 4.6.17 FCESS Enablement Losses

Enablement Losses are calculated for a Registered Facility in respect of each individual FCESS. Only Scheduled Facilities and Semi-Scheduled Facilities are eligible for FCESS Uplift payments. For an eligible Registered Facility, the Enablement Losses are the difference between its marginal energy offer price and the market clearing price for energy, multiplied by the highest Enablement Minimum for any FCESS that it is enabled to provide in that Dispatch Interval, with adjustments for Loss Factors.

## 4.7 Reserve Capacity

Reserve Capacity is split into the following parts:

- Capacity Payments - Payment to Market Participants for unallocated Capacity Credits.
- Capacity Credit Over-allocations Payment - Payment to Market Participants for receiving more Capacity Credit Allocations than its IRCR.
- Supplementary Capacity Payments - Payment to Market Participants associated with a Supplementary Capacity Contract.
- TRCC Charges - Charge to Market Participants to fund the cost of Capacity up to the Reserve Capacity Requirement.
- SRCC Charges - Charge to Market Participants to fund the payment of Capacity in excess of the Reserve Capacity Requirement.
- Capacity Cost Refund - Charge to Market Participants resulting from failure to meet obligations relating to Capacity Credits.
- Intermittent Load Refunds - Charge to Market Participants for Intermittent Load Refunds.
- Capacity Rebate - Payment to Market Participants redistributing the Capacity Refunds.

#### 4.7.3.1 Targeted Reserve Capacity Cost

MR 4.28.1(a) outlines the Targeted Reserve Capacity Cost as the cost of Capacity Credits acquired by AEMO (not traded bilaterally through a Capacity Credit Allocation) to just meet the Reserve Capacity Requirement. To implement this the following steps are followed.

**Step 1:** Determine how many Capacity Credits need to be acquired by AEMO to just meet the Reserve Capacity Requirement.

$$TRCCQ\_G\_D(d) = \min(RCR\_G\_CY(d), CC\_G\_D(d)) - (CCAR\_G\_D(d) - CCAOA\_G\_D(d)) \quad (292)$$

$$CC\_G\_D(d) = \sum_{f \in CCF(d)} CC\_F\_D(f, d) \quad (293)$$

$$CCAR\_G\_D(d) = \sum_{p \in P(d)} CCAR\_P\_D(p, d) \quad (294)$$

$$CCAOA\_G\_D(d) = \sum_{p \in P(d)} CCAOA\_P\_D(p, d) \quad (295)$$

**Step 2:** Identify the set of all Capacity Credits acquired by AEMO and order them by descending price.

$$CCTRCC\_G\_D(d) = \{t : T2P(t) \in P(d) \text{ or } T2F(t) \in CCF(d)\} \\ \text{ordered by descending } CCP\_T\_D(t, d) \text{ and then alphabetically, where } t \in CCTRCC\_G\_D(d) \quad (296)$$

$$CCP\_T\_D(t, d) = \begin{cases} EAP\_P\_D(t, d) & \text{for } t \in P(d) \\ RCP\_F\_D(T2F(t), d) & \text{for } t \in CCF(d) \end{cases} \quad (297)$$

$$CCQ\_T\_D(t, d) = \begin{cases} CCAOA\_P\_D(t, d) & \text{for } t \in P(d) \\ CC\_F\_D(t, d) - CCAM\_F\_D(t, d) & \text{for } t \in CCF(d) \end{cases} \quad (298)$$

$$TRCCrank\_T\_D(t, d) = \text{Position of price-quantity pair } t \text{ in } CCTRCC\_G\_D(d) \quad (299)$$

**Step 3:** Determine the cost of Capacity Credits acquired by AEMO to just meet the Reserve Capacity Target.

$$TRCC\_G\_D(d) = \sum_{t \in CCTRCC\_G\_D} CCP\_T\_D(t, d) \times \min(CCQ\_T\_D(t, d), \max(0, TRCCQ\_G\_D(d) - CCCQ\_T\_D(t, d))) \quad (300)$$

$$CCCQ\_T\_D(t, d) = \sum_{\substack{u \in CCTRCC\_G\_D(d) \\ TRCCrank\_T\_D(u, d) < TRCCrank\_T\_D(t, d)}} CCQ\_T\_D(u, d) \quad (301)$$

#### 4.7.5.2 Refund Caps

The calculations of  $MAXFR_F_CY$ ,  $MAXGR_P_CY$  and  $MAXPGR_P_CY$  require calculations for all Trading Days in the Capacity Year. This is important to note as very few other calculations require this forward-looking calculation. In order to perform this forward-looking calculation, the following assumptions are made for future Trading Days:

- $CC_F_D(f, d + 1) = CC_F_D(f, d)$
- The Facility remains registered to the current Market Participant for the remainder of the Capacity Year.

$$MAXPGR_P_CY(p, cy) = \sum_{d \in D.CY(cy)} MAXPGR_P_D(p, d) \quad (319)$$

$$MAXPGR_P_D(p, d) = \sum_{f \in SF(p,d) \cup SSF(p,d) \cup NSF(p,d) \cup indSF(p,d) \cup indSSF(p,d) \cup indNSF(p,d)} MAXFR_F_D(f, d) \quad (320)$$

$$MAXFR_F_CY(f, cy) = \sum_{d \in D.CY(cy)} MAXFR_F_D(f, d) \quad (321)$$

$$MAXFR_F_D(f, d) = CC_F_D(f, d) \times RCP_F_D(f, d) \quad (322)$$

COORDINATOR(d)	{}	G	D	11	Set containing the Coordinator	(4)
P(d)	{}	G	D		Set of participants (Rule Participants, ERA and the Coordinator) in Trading Day d	(3)

#### 4.10 Default Levy Adjustment

By the end of the second month following the end of a Financial Year, AEMO must re-allocate any Default Levies raised during that Financial Year.

Default Levy Adjustment is split into two parts:

- Payment to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.
- Charge to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.

$$DLASA\_P\_D(p, d) = DLAP\_P\_D(p, d) - DLAC\_P\_D(p, d) \quad (403)$$

$$DLAP\_P\_D(p, d) = \frac{\max(0, DLA\_P\_W(p, w))}{7} \quad (404)$$

$$DLAC\_P\_D(p, d) = \frac{-\min(0, DLA\_P\_W(p, w))}{7} \quad (405)$$

Variable	Units	SC	GR	Rule	Description	Ref
DLASA_P_D(p, d)	\$	P	D	9.20.11(e)	Default Levy Adjustment settlement amount for participant p in Trading Day d	(403)
DLAP_P_D(p, d)	\$	P	D	9.20.11(e)	The amount participant p is paid in Trading Day d for re-allocation of Default Levies raised during the most recently ended Financial Year	(404)
DLAC_P_D(p, d)	\$	P	D	9.20.11(e)	The amount participant p is charged in Trading Day d for re-allocation of Default Levies raised during the most recently ended Financial Year	(405)
DLA_P_W(p, w)	\$	P	W0		The Default Levy adjustment (including GST) to put participant p in the position it would have been in had it paid the amount determined under clause 9.20.11(b) instead of the amounts actually paid under clause 9.20.8 applicable in Trading Week w	I

## 4.11 GST

GST is charged for the provision of eligible goods and services. The Variable Categorisation section outlines which statement summary variables (of day granularity) have GST applied and which are exempt. The interval-equivalent variables are identified in the sets used in the equations below.

$$GST\_P\_D(p, d) = GSTP\_P\_D(p, d) - GSTC\_P\_D(p, d) \quad (406)$$

$$GSTP\_P\_D(p, d) = GST\_G\_D(d) \times \sum_{v \in PGST(d)} v(p, d) \quad (407)$$

$$GSTC\_P\_D(p, d) = GST\_G\_D(d) \times \sum_{v \in CGST(d)} v(p, d) \quad (408)$$

Variable	Units	SC	GR	Rule	Description	Ref
GST_P_D(p, d)	\$	P	D		Net GST paid/charged to participant p for Trading Day d	(406)
GSTP_P_D(p, d)	\$	P	D	9.1.3	GST paid to participant p in Trading Day d	(407)
GSTC_P_D(p, d)	\$	P	D	9.1.3	GST charged to participant p in Trading Day d	(408)
GST_G_D(d)		G	D		GST rate for Trading Day d	I
PGST(d)	{}	G	D		Set of all variables which are payments to which GST applies in Trading Day d	I
CGST(d)	{}	G	D		Set of all variables which are charges to which GST applies in Trading Day d	I
I(d)	{}	G	D		Set of Trading Intervals in Trading Day d	I

### 4.11.1 Variable Categorisation

The table below outlines the variables that are payments from AEMO to the Rule Participant or charges to be paid by the Market Participant to AEMO and whether GST is applicable.

Variable	P or C	GST	Rule	Description
STEMSAS_P_D(p, d)	P	Y		Settlement amount for energy sold in STEM for participant p in Trading Day d
STEMSAD_P_D(p, d)	C	Y		Settlement amount for energy purchased in STEM for participant p in Trading Day d

Variable	P or C	GST	Rule	Description
ETSA_P_D(p, d)	P	Y		Energy trading amount for energy sold in the Real-Time Energy market for participant p for Trading Day d
ETDA_P_D(p, d)	C	Y		Energy trading amount for energy purchased in the Real-Time Energy market for participant p for Trading Day d
EUP_P_D(p, d)	P	Y		Energy uplift amount payable to participant p for Trading Day d
EUR_P_D(p, d)	C	Y		Energy uplift recoverable amount for participant p for Trading Day d
OCP_P_D(p, d)	P	Y	9.11.3	Outage compensation payment for participant p in Trading Day d
OCR_P_D(p, d)	C	Y	9.11.6	Charge to fund outage compensation, for participant p in Trading Day d
CRpayment_P_D(p, d)	P	Y	9.10.4	Contingency Reserve Raise amount payable to participant p for Trading Day d
CLpayment_P_D(p, d)	P	Y	9.10.8	Contingency Reserve Lower amount payable to participant p for Trading Day d
RoCoFpayment_P_D(p, d)	P	Y	9.10.12	RoCoF Control Service amount payable to participant p for Trading Day d
RRpayment_P_D(p, d)	P	Y		Regulation Raise amount payable to participant p for Trading Day d
RLpayment_P_D(p, d)	P	Y		Regulation Lower amount payable to participant p for Trading Day d
SRSpayment_P_D(p, d)	P	Y	9.10.25	System Restart Service amount payable to participant p for Trading Day d
NCESSpayment_P_D(p, d)	P	Y	9.10.27A	NCESS amount payable to participant p for Trading Day d
FCESSUpayment_P_D(p, d)	P	Y	9.10.27E	FCESS Uplift Payment amount payable to participant p for Trading Day d
CRcharge_P_D(p, d)	C	Y	9.10.29	Contingency Reserve Raise amount recoverable from participant p for Trading Day d
CLcharge_P_D(p, d)	C	Y	9.10.31	Contingency Reserve Lower amount recoverable from participant p for Trading Day d
RoCoFcharge_P_D(p, d)	C	Y	9.10.33	RoCoF Control Service amount recoverable from participant p for Trading Day d
RRcharge_P_D(p, d)	C	Y		Regulation Raise amount recoverable from participant p for Trading Day d
RLcharge_P_D(p, d)	C	Y		Regulation Lower amount recoverable from participant p for Trading Day d
SRScharge_P_D(p, d)	C	Y	9.10.40	System Restart Service amount recoverable from participant p for Trading Day d
NCESScharge_P_D(p, d)	C	Y	9.10.44	NCESS amount recoverable from participant p for Trading Day d
CAPREBSA_P_D(p, d)	P	Y	4.29.3(d)vii	Participant Capacity Rebate (whereby Capacity Cost Refunds are redistributed) for participant p in Trading Day d
CCSA_P_D(p, d)	P	Y	9.8.3(b)	Payment for non-allocated Capacity Credits for participant p in Trading Day d
IMLR_P_D(p, d)	C	Y	4.29.3(dA)	Intermittent Load Refunds for participant p in Trading Day d
SUPCAPSA_P_D(p, d)	P	Y	9.8.3(d)	Payment to be made under Supplementary Capacity Contracts to participant p in Trading Day d
CCR_P_D(p, d)	C	Y	4.6.2E	Capacity Cost Refund charged to participant p in Trading Day d
CCAOASA_P_D(p, d)	P	Y	9.8.3(f)	Capacity Credit Allocation over-allocation Payment (when Capacity Credit Allocations exceed IRCR) for participant p in Trading Day d

Variable	P or C	GST	Rule	Description
TRCC_P_D(p, d)	C	Y	9.8.4(a)	Charge to cover the Targeted Reserve Capacity Cost for participant p in Trading Day d
SRCC_P_D(p, d)	C	Y	9.8.4(b)	Charge to cover the Shared Reserve Capacity Cost for participant p in Trading Day d
MPMFSA_P_D(p, d)	C	N	9.12.3	Market Participant Market Fees settlement amount charged to participant p for Trading Day d
MPRFSA_P_D(p, d)	C	N	9.12.4	Market Participant Regulator Fees settlement amount charged to participant p for Trading Day d
MPCFSA_P_D(p, d)	C	N	9.12.4A	Market Participant Coordinator Fees settlement amount charged to participant p for Trading Day d
SFMFSA_P_D(p, d)	P	N	9.13.2	Service Fee Settlement Amount paid to AEMO for Trading Day d
SFRFSA_P_D(p, d)	P	N	9.13.3	Service Fee Settlement Amount paid to the ERA for Trading Day d
SFCFSA_P_D(p, d)	P	N	9.13.4	Service Fee Settlement Amount paid to the Coordinator p for Trading Day d
DLAP_P_D(p, d)	P	N	9.20.11(e)	The amount participant p is paid in Trading Day d for re-allocation of Default Levies raised during the most recently ended Financial Year
DLAC_P_D(p, d)	C	N	9.20.11(e)	The amount participant p is charged in Trading Day d for re-allocation of Default Levies raised during the most recently ended Financial Year
GSTP_P_D(p, d)	P	N	9.1.3	GST paid to participant p in Trading Day d
GSTC_P_D(p, d)	C	N	9.1.3	GST charged to participant p in Trading Day d
INTP_P_D(p, d)	P	N		Net interest paid to participant p for Trading Day d
INTC_P_D(p, d)	C	N		Net interest charged to participant p for Trading Day d

The table below assists in understanding how the payments and charges are related.

Category	Payments	=	Charges
STEM	STEMSAS_G_D(d)	=	STEMSAD_G_D(d)
Energy	ETSA_G_D(d)	=	ETDA_G_D(d)
Energy Uplifts	EUP_G_D(d)	=	EUR_G_D(d)
Changed Outage Compensation	OCP_G_D(d)	=	OCR_G_D(d)
Essential System Services	CRpayment_G_D(d) + CLpayment_G_D(d) + RRpayment_G_D(d) + RLpayment_G_D(d) + RoCoFpayment_G_D(d) + SRSpayment_G_D(d) + NCESSpayment_G_D(d) + FCESSUpayment_G_D(d)	=	CRcharge_G_D(d) + CLcharge_G_D(d) + RRcharge_G_D(d) + RLcharge_G_D(d) + RoCoFcharge_G_D(d) + SRSccharge_G_D(d) + NCESScharge_G_D(d)
Capacity	CCSA_G_D(d) + CCAOASA_G_D(d) + SUPCAPSA_G_D(d)	=	TRCC_G_D(d) + SRCC_G_D(d) + IMLR_G_D(d) + RCSD_G_D(d) + DSMRCS_D_G_D(d)
Capacity Cost Refunds	CAPREBSA_G_D(d)	=	CCR_G_D(d)
Market Fees	SFMFSA_G_D(d)	=	MPMFSA_G_D(d)
Regulator Fees	SFRFSA_G_D(d)	=	MPRFSA_G_D(d)
Coordinator Fees	SFCFSA_G_D(d)	=	MPCFSA_G_D(d)
Default Levy Adjustments	DLAP_G_D(d)	=	DLAC_G_D(d)
GST	GSTP_G_D(d)	=	GSTC_G_D(d)
Interest	INTP_G_D(d)	=	INTC_G_D(d)

## 4.12 Interest

Interest is paid/charged in the WEM for two reasons:

- Interest paid/charged as part of the Adjustment Process [MR 9.1.3]
- Interest paid on security deposits [MR 2.38.5, 4.13.6, 4.13.14, 4.13A.13, and 4.13A.19]

The payment of interest on security deposits is handled separate to that outlined in this formulation.

$$NETINT\_P\_D(p, d) = INTP\_P\_D(p, d) - INTC\_P\_D(p, d) \quad (409)$$

$$INTP\_P\_D(p, d) = \max(0, INT\_P\_D(p, d)) \quad (410)$$

$$INTC\_P\_D(p, d) = -\min(0, INT\_P\_D(p, d)) \quad (411)$$

$$INT\_P\_D(p, d) = INT1\_P\_D(p, d) + INT2\_P\_D(p, d) + INT3\_P\_D(p, d) \quad (412)$$

$$INT1\_P\_D(p, d) = \begin{cases} (NOINT\_P\_D(p, d) - NOINT0\_P\_D(p, d)) & \text{for } Adj1NULLFlag\_G\_W(d) = 1 \\ & \text{and } Adj0NULLFlag\_G\_W(d) = 0 \\ \times \sum_{j \in INTDAY S1(d)} \frac{BBR\_G\_D(j)}{365} & \\ (NOINT1\_P\_D(p, d) - NOINT0\_P\_D(p, d)) & \text{otherwise} \\ \times \sum_{j \in INTDAY S1(d)} \frac{BBR\_G\_D(j)}{365} & \end{cases} \quad (413)$$

$$INT2\_P\_D(p, d) = \begin{cases} (NOINT\_P\_D(p, d) - NOINT1\_P\_D(p, d)) & \text{for } Adj2NULLFlag\_G\_W(d) = 1 \\ & \text{and } Adj1NULLFlag\_G\_W(d) = 0 \\ \times \sum_{j \in INTDAY S2(d)} \frac{BBR\_G\_D(j)}{365} & \\ (NOINT2\_P\_D(p, d) - NOINT1\_P\_D(p, d)) & \text{otherwise} \\ \times \sum_{j \in INTDAY S2(d)} \frac{BBR\_G\_D(j)}{365} & \end{cases} \quad (414)$$

$$INT3\_P\_D(p, d) = \begin{cases} (NOINT\_P\_D(p, d) - NOINT2\_P\_D(p, d)) & \text{for } Adj3NULLFlag\_G\_W(d) = 1 \\ & \text{and } Adj2NULLFlag\_G\_W(d) = 0 \\ \times \sum_{j \in INTDAY S3(d)} \frac{BBR\_G\_D(j)}{365} & \\ (NOINT3\_P\_D(p, d) - NOINT2\_P\_D(p, d)) & \text{otherwise} \\ \times \sum_{j \in INTDAY S3(d)} \frac{BBR\_G\_D(j)}{365} & \end{cases} \quad (415)$$

### 4.13 Estimation

Prudential calculations require the estimation of exposure before all inputs are known.

When estimating settlement data for prudentials, AEMO does not modify settlement equations, but instead estimates inputs which are not known at the time of calculation. This section details the methodology for estimating non-metering settlement inputs (refer to Section 3.3 for the methodology for estimating metering inputs).

When undertaking a settlement run, no inputs are estimated, as required under the rules.

$$estMAXTEMP\_F\_D(f, d) = \begin{cases} MAXTEMP\_F\_D(f, d) & \text{if } ESTIMATIONFlag\_G\_W(d) = 0 \\ & \text{or } TEMPNullFlag\_G\_D(d) = 0 \\ 25^{\circ}C & \text{otherwise} \end{cases} \quad (416)$$

$$estIRCR0\_P\_M(p, m) = \begin{cases} IRCR0\_P\_M(p, m) & \text{if } ESTIMATIONFlag\_G\_W(d) = 0 \\ & \text{or } IRCR0NullFlag\_G\_M(m) = 0 \\ IRCRindicative\_P\_M(p, m) & \text{otherwise} \end{cases} \quad (417)$$

Variable	Units	SC	GR	Rule	Description	Ref
estMAXTEMP_F_D(f, d)	°C	F	D		Daily maximum temperature (including estimation) of the Energy Producing System associated with Facility f for Trading Day d	(416)

ESTIMATIONFlag_G_W(w)	Flag	G	W0		Flag that is 1 when estimation is permitted for Trading Week w, and 0 otherwise	I
TEMPNullFlag_G_D(d)		G	D		Flag that is 1 when the daily maximum temperatures are unavailable for Trading Day d, and 0 otherwise	I

Variable	Units	SC	GR	Rule	Description	Ref
IRCR0NullFlag_G_M(m)	MW	G	M		Flag that is 1 when the Individual Reserve Capacity Requirements have not been published for Trading Month m, and 0 otherwise	I

## 5 Settlements

Daily outputs from the common calculation engine may be aggregated to achieve the required settlement outputs.

$$TOTAL\_P\_W(p, w) = \sum_{d \in D(w)} TOTAL\_P\_D(p, d) \quad (418)$$

Variable	Units	SC	GR	Rule	Description	Ref
TOTAL_P_W(p, w)	\$	P	W0		Total settlement amount (including GST and interest) for participant p in Trading Week w	(418)
TOTAL_P_D(p, d)	\$	P	D		Total settlement amount (including GST and interest) for participant p in Trading Day d	(62)
D(w)	{}	G	W0		Set of Trading Days in Trading Week w	I

## 6 Prudentials

Trading Margin calculations are performed on a daily basis to manage prudential risk. An input to these equations are the outputs of the settlement calculations documented in previous sections.

### 6.1 Trading Margin

$$TM\_P\_D(p, d) = TL\_P\_D(p, d) - OA\_P\_D(p, d) \quad (419)$$

$$TL\_P\_D(p, d) = PF\_G\_D(d) \times CREDSUP\_P\_D(p, d) \quad (420)$$

$$PF\_G\_D(d) = 0.87 \quad (421)$$

$$OA\_P\_D(p, d) = CEE\_P\_D(p, d) + INP\_P\_D(p, d) - PP\_P\_D(p, d) \quad (422)$$

$$CEE\_P\_D(p, d) = \sum_{j \in EXPDAYS(d)} EE\_P\_D(p, j) \quad (423)$$

$$EE\_P\_D(p, d) = -(TOTAL\_P\_D(p, d) - TOTAL_{prev}\_P\_D(p, d)) \quad (424)$$
