1. Context

This template is to assist stakeholders in giving feedback about the options detailed in the issues paper associated with the Standalone Power Systems consultation.

The changes being proposed are because of NER rule changes which have occurred requiring changes to AEMO's Retail Electricity Market Procedures.

2. Procedure Drafting Changes

Metrology Procedure Part A

Section	Description	Participant Comments
8(b)	Inclusion of test for clarification	<p>It is unclear why this change has been included. Is this related to the scope of the SAPS consultation? We cannot see any narrative regarding this change in the draft reports.</p> <p>AS 1284.13 allows sample testing to be undertaken using either the 'Attributes' method or by 'Variables' methods, and also allows the process to switch between the two should the circumstances call for it.</p> <p>The proposed change will limit participants ability to do this, and participants who already have this built into their processes will need to change. As using the 'Variables' method is permitted under the standard it is unclear why Metrology Part A. would remove this flexibility.</p> <p>We recommend this to be removed from the consultation until such time engagement with impacted participants has occurred.</p>
